DETAILED ACTION

Double Patenting

The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

Claims 1-14 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-5 of U.S. Patent No. 7,184,443 B2. Although the conflicting claims are not identical, they are not patentably distinct from each other because comparing the independent claims of the application (1, 5, 7, and 11) against claim 1 of the patent both the patent and the application identify a set of requests for packets to sent from the input of a switch to the output of the switch, both maintain a grant start position, both determine a grant advancement position, both update the grant starting position, both maintain a sequence of the requests.

At the time of the invention, it would have been obvious to an ordinary person of skill in the art to utilize the patent. The suggestion/motivation for doing so would have been that the patent exists and has already been developed saving time and money and allowing a faster time to market.

Conclusion

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

1. Schweinhart et al. (US 2003/0032391 A1) discloses a low latency handling of TCP messages in a broadband satellite communication system.
